7.5.1 General

7.5.2 Creating and updating

7.5.3 Control of documented information

8 Operation

8.1 Operational planning and control

8.1.1 General

8.1.2 Eliminating hazards and reducing HS&E risks

8.1.3 Management of change

8.1.4 Procurement

8.2 Requirements for products and services **and** Emergency preparedness and response

8.3 Design and development of products and services

8.3.1 General

8.3.2 Design and development planning

8.3.3 Design and development inputs

8.3.4 Design and development controls

8.3.5 Design and development outputs

8.3.6 Design and development changes

8.4 Control of externally provided processes, products, and services

8.4.1 General

8.4.2 Type and extent of control

8.4.3 Information for external providers

8.5 Production and service provision

8.5.1 Control of production and service provision

8.5.2 Identification and traceability

8.5.3 Property belonging to customers or external providers

8.5.4 Preservation

8.5.5 Post-delivery activities

8.5.6 Control of changes

8.6 Release of products and services

8.7 Control of nonconforming outputs

9 Performance evaluation

9.1 Monitoring, measurement, analysis, and performance evaluation

9.1.1 General

9.1.2 Customer satisfaction & Evaluation of compliance

Document title: Integrated management system guideline	Organization logo	Document code: IMS-GU-01
Page: 4 of 23		Revision: 00 Issue Date: 2025/07/30

9.1.3 Analysis and evaluation

9.2 Internal audit

9.2.1 General

9.2.2 Internal audit programme

9.3 Management review

10 Improvement

10.1 General

10.2 Incident, nonconformity, and corrective action

10.3 Continual improvement

Page: 5 of 23		Revision: 00 Issue Date: 2025/07/30

1 Purpose and Scope

The purpose of this guide is to support users in the successful implementation of an integrated management system. This guide comprehensively covers all clauses of ISO 9001:2015, ISO 45001:2018, and ISO 14001:2015.

1.1 History of the company

Crystal Ware Dishwashers Ltd. was founded on 12 February 2011 with the objective of transforming the dishwasher industry. Headquartered at the Tech Industrial Estate in Birmingham, the company specializes in the design and manufacture of both residential and commercial dishwasher units. Over time, Crystal Ware has established a distinguished reputation for innovation, quality, and dependability. Presently, the company is recognized as a reputable provider dedicated to delivering efficient and reliable cleaning solutions on a global scale.

2 Definitions

HSE: Health, Safety, and Environment

Organization: Current Company

3 Responsibility and Authority

Responsibility and authority needed to implement the HSE management system have been determined in the human resources procedure by the CEO.

4 Context of the organization

4.1 Understanding the organization and its context

Responsibility:

1. Managing Director
2. QA Manager
3. Process Owners

Related Documents:

Context of the Organization Procedure: (IMS-P-CO-01)

According to Clause 4.1 of the Quality, Safety, Health, and Environmental Management Standards, organizations are required to identify, monitor, and review internal and external issues relevant to their strategic goals and objectives that influence the effectiveness of the Quality, Safety, and Environmental Management System.

Related Document: Context of the Organization Procedure

Responsibility: It is the responsibility of process owners to identify and assess environmental factors relevant to their processes and to determine and implement appropriate actions.
The Managing Director is responsible for reviewing and approving these actions.

This clause can be addressed through the following two approaches:

First Approach:

1. Identifying environmental factors affecting quality, safety, and environmental objectives using the Organizational Context Form (IMS-F-CO-07).
2. Recording identified internal and external factors related to each process in Form (IMS-F-CO-07).
3. Implementation of the defined actions by documenting them in the Project Planning Form (IMS-F-CO-09).
4. Project progress (%) shall be monitored and recorded based on the relevant schedule, utilizing the output information provided in the FO Project Planning Form (IMS-F-CO-09).
5. The effectiveness of the implemented measures should be evaluated after implementation and recorded in the final column of the form (IMS-F-CO-07) as follows:

5.1 100% achievement of the objectives: 100% effectiveness
5.2 70% achievement of the objectives: 70% effectiveness
5.3 50% achievement of the objectives: 50% effectiveness
5.4 25% achievement of the objectives: 25% effectiveness
5.5 No achievement of the objectives: 0% effectiveness

Sample: Organization Context

Table No. 3

Second approach:

To implement the SWOT matrix, the following actions shall be undertaken:

Although preparing a strategic plan is not required by ISO 9001, ISO 14001, and ISO 45001 standards, this clause can be examined using a SWOT analysis and documented through form (FD022).

1. Identify Internal and External Factors

In this method, internal and external influential factors are first identified using the organization's internal and external factor identification forms (IMS-F-CO-03 and IMS-F-CO-04). As is commonly known, the output of internal factors includes the organization's strengths and weaknesses, while the output of external factors includes opportunities and threats.

2. Transfer Data to SWOT Matrix

Transcribe the data from the internal and external factor identification forms into the SWOT Matrix Form (IMS-F-CO-05).

- Internal factor data → record in “Strengths” and “Weaknesses” sections.
- External factor data → record in “Opportunities” and “Threats” sections.

3. Analyze Interactions

Evaluate the interactions between internal and external factors in the SWOT matrix. Assess how each pair of factors may impact the organization's strategic objectives.

4. Formulate Strategies

Develop strategies aimed at:

Document title: Integrated management system guideline	Organization logo	Document code: IMS-GU-01
Page: 11 of 23		Revision: 00 Issue Date: 2025/07/30

- Reducing or eliminating negative interactions (e.g., Weakness–Threat)
- Leveraging positive interactions (e.g., Strength–Opportunity)

5. **Review and Prioritize Strategies**

Review all proposed strategies for feasibility and relevance. Prioritize them based on impact, urgency, and alignment with organizational goals.

6. **Document Strategic Objectives**

Enter each prioritized strategy as a distinct strategic objective into the Project Planning Form (FO) for execution.

7. **Assign Project Managers**

Appoint a dedicated project manager responsible for overseeing the implementation of each strategic objective.

8. **Allocate Resources**

Allocate the necessary resources (financial, human, technical) required for the effective execution of each project.

9. **Implement the Projects**

Initiate and execute the projects in accordance with the defined plans and timeframes.

10. **Monitor Progress**

Continuously monitor the progress of each project against defined milestones, deliverables, and KPIs.

11. **Evaluate Results**

Upon project completion, evaluate the outcomes to determine:

- The extent to which negative environmental influences have been mitigated
- The degree to which positive environmental factors have been enhanced

Sample: Internal Factors

Internal Strategic Factors	Weight	Score	Final Score	Description
Strengths:				
Presence of a qualified and experienced team in assembly and testing processes	0.35	4	1.4	
Advanced in-house testing equipment for product safety and energy efficiency	0.30	3	0.9	

Document title: Integrated management system guideline	Organization logo	Document code: IMS-GU-01
Page: 12 of 23		Revision: 00 Issue Date: 2025/07/30

Weaknesses: Lack of documented environmental impact controls during cleaning processes Insufficient safety training programs for temporary or contract workers	0.20	2	0.4	
	0.15	1	0.15	
Total;	1		2.85	
Provided by: Signature: Date:	approved by CEO: Signature: Date:			

Table No. 4

Sample: External Factors

External Strategic Factors	Weight	Score	Final Score	Description
Opportunities: Rising demand for energy-efficient and environmentally friendly appliances Government incentives for reducing industrial emissions	0.40	4	1.6	
	0.25	3	0.75	
Threats: Increased competition from international low-cost appliance manufacturers Frequent changes in occupational safety regulations	0.20	2	0.40	
	0.15	3	0.45	
Total;	1		3.20	
Provided by: Signature: Date:	approved by CEO: Signature: Date:			

Table No. 5

Sample: SWOT Matrix

	Strengths (S)	Weaknesses (W)
	Presence of a qualified and experienced team in assembly and testing processes Advanced in-house testing equipment for product safety and energy efficiency	Lack of documented environmental impact controls during cleaning processes Insufficient safety training programs for temporary or contract workers
Opportunities (O)	Strategies (SO)	Strategies (WO)
Rising demand for energy-efficient and environmentally friendly appliances Government incentives for reducing industrial emissions	Use skilled team and advanced testing to develop energy-efficient appliances responding to rising market demand. Expand training programs leveraging team expertise to improve product safety aligning with environmental regulations.	Implement documented environmental controls using government incentives for industrial emission reduction. Develop and document safety training programs for temporary workers using external funding or incentives.
Threats (T)	Strategies (ST)	Strategies (WT)
Increased competition from international low-cost appliance manufacturers Frequent changes in occupational safety regulations	Leverage advanced equipment and skilled workforce to ensure compliance with evolving occupational safety regulations. Use in-house testing capabilities to maintain product quality despite increased competition.	1. Establish comprehensive environmental and safety documentation to mitigate risks from changing regulations. 2. Enhance safety training and environmental control documentation to reduce vulnerability to regulatory changes and competition.

4.2 Understanding the needs and expectations of **workers** and other interested parties

Responsibility:

- 1. Managing Director
- 2. QA Manager
- 3. Process Owners

Related Documents:

Context of the Organization Procedure: (IMS-P-CO-01)

In accordance with the requirements of Clause 4.2 of the standard, the organization shall identify relevant interested parties, including but not limited to: customers, employees, managers, shareholders, governmental bodies related to quality, safety, and the environment, suppliers, banks, and insurance companies.

The following steps must then be performed using the Stakeholder Needs and Expectations Form:

- 1. Identify the relevant stakeholders.
- 2. Determine the needs and expectations of each stakeholder.
- 3. Identify any applicable legal and regulatory requirements related to these needs and expectations.
- 4. Define the mechanisms by which the organization will fulfill these needs and expectations.
- 5. Assign responsibility for ensuring the fulfillment of stakeholder needs and expectations.
- 6. Assign responsibility for reviewing and updating the list of stakeholders and their needs.
- 7. Establish the frequency or period for reviewing and updating the stakeholder list.

Sample: Interested Parties

4.3 Determining the scope of the integrated management system

Responsibilities:

Top Management

Management Representative

Related Documents:

Context of the Organization procedure

Explanation of clause 4.3

The boundaries of the Integrated Management System (IMS) have been determined based on the requirements of Clause 4.3 and by taking into account the requirements of Clauses 4.1 (understanding

Document title: Integrated management system guideline	Organization logo	Document code: IMS-GU-01
Page: 16 of 23		Revision: 00 Issue Date:: 2025/07/30

the organization and its context) and 4.2 (understanding the needs and expectations of interested parties).

These considerations ensure that the IMS scope appropriately reflects the internal and external environment of the organization as well as the relevant stakeholders.

Accordingly, the IMS scope encompasses all activities, products, and services related to the design, procurement, assembly, testing, and delivery of household dishwashers.

The IMS fully covers all applicable requirements of the three standards, integrating quality, environmental, and occupational health and safety management aspects.

This scope includes the following processes:

Design and Development (R&D)

Production and Service Provision

Purchase Process

Quality Control Process

Sales and Customer Relationship Process

Warehouse Process

Change Management Process

Communication Process

Compliance Evaluation with Legal Requirements

Compliance Obligation Process

Corrective Action Process

Determining Legal Requirements

Documents Control Process

Emergency Preparedness and Response Process

Environmental Aspects Process

Hazard Identification Process

Incident, Investigation, and Reporting Process

Internal Audit Process

Knowledge Management Process

Management Review Process

Monitoring and Analysis Process

Operational Planning and Control Process

Risk and Opportunity Management Process

Resources Management Process

Training Process

Document title: Integrated management system guideline	Organization logo	Document code: IMS-GU-01
Page: 17 of 23		Revision: 00 Issue Date:: 2025/07/30

Infrastructure Maintenance Process

The IMS scope excludes no clauses of the standards and ensures consistent fulfillment of customer requirements, compliance with applicable legal and regulatory obligations, environmental protection, and workplace health and safety.

4.4 integrated management system and its processes

Responsibilities:

The management representative and process owners share the responsibility for implementing this clause of the standard.

Related Documents:

Context of the Organization procedure

Explanation of clause 4.4

In accordance with the requirements of Clause 4.4, the organization shall establish, implement, maintain, and continually improve an integrated management system for quality, environmental, and occupational health and safety, and shall determine the necessary processes and their interactions.

4.4.1 Quality management system processes

Clause 4.4 of the ISO 9001 standard outlines the requirements for the organization's quality management system (QMS) processes. It mandates the definition of process inputs and outputs, the identification and sequencing of process activities, the assignment of responsibilities and authorities, the determination of necessary resources, the identification of associated risks and opportunities, and the establishment of methods for monitoring, measuring, and controlling these processes to ensure their effective operation and continual improvement.

4.4.2 Extent of the Organization

According to the requirements of this clause in the ISO 9001 standard, the organization shall maintain documented information, to the extent necessary, to support the operation of processes and ensure they are carried out as planned.

Although the preparation of *safety and environmental processes is not a mandatory* requirement, **ISODOC GROUP** Consulting has developed a complete set of processes for the Quality, Safety, and Environmental Management System. This effort is intended to serve an educational purpose by

Document title: Integrated management system guideline	Organization logo	Document code: IMS-GU-01
Page: 18 of 23		Revision: 00 Issue Date: 2025/07/30

facilitating users' understanding of ISO standards and Integrated Management System (IMS) documentation (IMS-F-CO-02).

Processes:

Design and Development (R&D)

Production and Service Provision

Purchase Process

Quality Control Process

Sales and Customer Relationship Process

Warehouse Process

Change Management Process

Communication Process

Compliance Evaluation with Legal Requirements

Compliance Obligation Process

Corrective Action Process

Determining Legal Requirements

Documents Control Process

Hazard Identification Process

Incident, Investigation, and Reporting Process

Internal Audit Process

Knowledge Management Process

Management Review Process

Monitoring and Analysis Process

Operational Planning and Control Process

Risk and Opportunity Management Process

Resources Management Process

Training Process

Infrastructure Maintenance Process

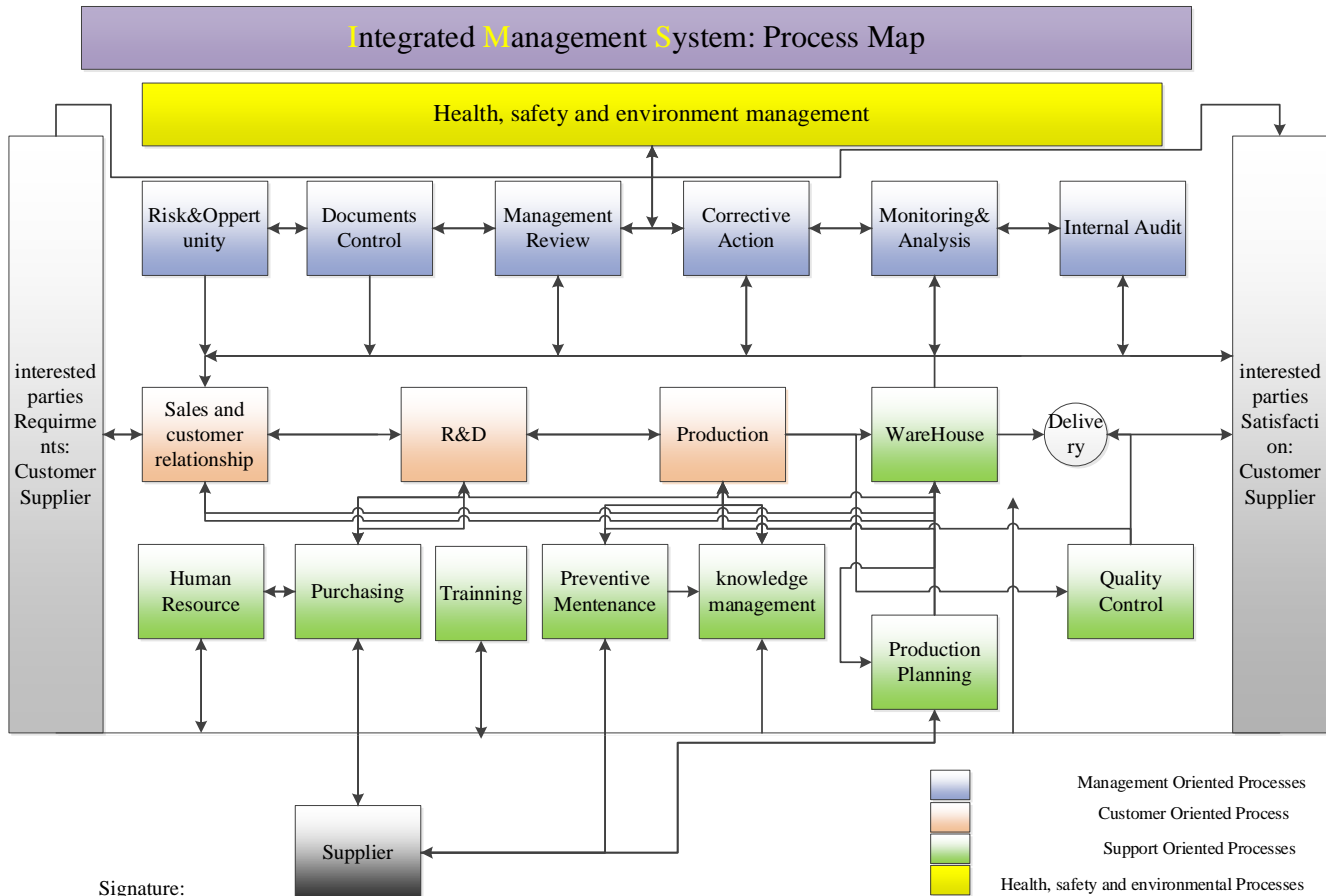

Document title: Integrated management system guideline	Organization logo	Document code: IMS-GU-01
Page: 19 of 23		Revision: 00 Issue Date: 2025/07/30

Necessary measures for implementing this requirement of the Standard:

1. Identify the organization's core (primary) processes in accordance with the nature of its business activities.
2. If the organization is a manufacturing entity, the core processes typically include design, production, and sales of the product.
3. If the organization is commercial/trading, the core processes generally comprise procurement and sales.
4. If the organization provides services, the core processes will relate to the delivery of such services.
5. Upon identification of the core processes, develop a document titled "Process Map (IMS-F-CO-01)", in which the interaction between the main processes and the customer, as well as their interrelationships with one another, is defined.
6. The interactions shall be bidirectional. For example, a process such as sales receives an order as input from the customer and, after processing, submits its output to the warehouse or production process. Conversely, each of these processes provides corresponding outputs back as inputs to the relevant process.
7. Inputs and outputs may consist of products, materials, tools and equipment, information, documents, and the like.
8. Subsequently, identify the management processes — such as management review, monitoring, measurement and data analysis, strategic management, and determination of responsibilities and authorities — which guide and control the organization, and define their interaction with the other processes (IMS-F-CO-02).
